Subject: FW: Facebook as a channel partner for AWS?

Russ, Scott, Vivek,

We're meeting with Adam Selipsky tomorrow at 3pm in Seattle to demo the Facebook platform and discuss the possibility of Facebook as a channel for AWS. Dave Morin from our platform team will demo a few sample platform applications that we've created internally, one of which is a simple Amazon book review application.

If you guys are around, we'd love you to join for this demo. We're getting close to finalizing our API's, at which point we'll be able to point you to them so that your India team can start working on this (maybe our book review sample app will help them get started). Understanding that you need a couple of months of lead time and want to avoid thrash, we're planning to send you the API's in the next couple of weeks (as soon as they are hardened).

-Dan

Dan - I'd be happy to meet. Probably can squeeze in 1 hour on Friday, maybe we can just all talk fast. Stacey can coordinate the exact time.

Thanks,
Adam

hey dan. i'm ooto on friday, but maybe adam selipsky (cc'd above) and you can meet. adam is our VP of product management and developer relations across AWS.

we don't have an associates program for AWS (we don't have the margin in the product to do so), but it's worth your guys chatting about how you guys can leverage these services. i think you guys might be able to drive greater conversion on your site of developers creating facebook widgets if you offer services like S3 and EC2 that make it easier and lower risk to get started.

Subject: Re: Facebook as a channel partner for AWS?

Andy,

We believe we're going to attract tens of thousands of small to medium-sized developers to build applications/widgets for Facebook. S3, EC2, etc lowers the friction for someone who wants to develop on our platform but can't afford the start-up costs. It also helps us ensure that these applications can scale if they start to get viral traction.

I'm not sure what this would look like in terms of a partnership. Do you have affiliate-like deals for partners who drive AWS revenue? Is there something we can do to cross-promote? Other ideas?

I might be in Seattle on Friday with one of our guys from the platform team. Let me know if you want to see a demo and discuss the possibilities in person.

By the way, this is separate from building an Amazon application. We're working with Russ and Merlino on that front. Now that our Associates deal is done, we just have to harden our api's so that the India team can start working on it. One of our guys actually built a little prototype to display on a user's profile page "the books that I'm currently reading" (which we can also show you on friday) -- we could even pitch the code over the fence to the India team to get them started.

-Dan

hey dan. could you provide more information with regard to how this would work? not sure i understand how you'd be a channel for AWS. could you lay out what you'd expect the scenario to be?

thanks a ton,
andy

Subject: Facebook as a channel partner for AWS?

Andy – Separate from the discussion about Jeff's participation in our press release (Russ made it very clear that it's not going to happen), would you be interested in positioning Facebook Platform as a channel for Amazon Web Services? If we're successful in attracting a large number of developers, this could be great promotion for AWS. Let me know if you'd like to discuss. -Dan

Subject: FW: Current FBML documentation/spec

Andy, Russ – what if we tie into our platform launch an endorsement of EC2 (and other amazon web services) for our developer community to use when they build apps for Facebook? If we made this about the Amazon application for Facebook (using ECS) + Amazon Web Services as a resource for Facebook platform developers, would Jeff be willing to participate in our press release? We're looking for a couple of CEO's (only considering major internet companies) to participate in this launch and Jeff is at the top of our list. -Dan

Dan/Dave,

We ran the Jeff idea up the flag pole and unfortunately it's not something he's willing to do at this point given his time constraints and focus on strategic initiatives in other areas of the business. This should not be construed as our being any less committed to this partnership. I'm pretty confident we could get someone here at the VP level to provide a quote in a press release.

On the developing the app front, this would be the best way for us to make this a reality by launch. Who can Vivek work with directly on your end and what are next steps?

Scott

Subject: RE: Current FBML documentation/spec

Russ – how about if we develop most of the app (with some level of participation from your team) and then turn over the code to you after we launch? This would allow us to include Amazon in our launch press (which I think we both want to achieve if possible) while hitting the aggressive timeline that we're on. If you're open to this solution, I'll take it back to our team to find out if we can get the resources. If we do move forward with this solution and we come up with a killer app, would it be possible to get a quote from Jeff in our press release? -Dan

as I told scott, i'm happy to push our technical teams to move ahead on this as quickly as possible, but i wanted to be clear and set expectations about what we could achieve in 4 weeks. we are really looking forward to inking this and moving ahead, and don't want to seem close-minded about trying to support you -- and we remain open to any ideas on this.

best,

rg

Guys,

Russ and I touched base on this and while we'd love to do all we can by launch, given our technical team does not yet have a tech spec in front of them, it's highly unlikely we'd be able to deliver on a widget app by May 24. We were hoping to get a tech spec three weeks ago to put our tech team in front of it, but as of now we're only 6-7 weeks away from your launch. As soon as you can get me a draft, I'll raise it again with the tech team, but again, I just want to set expectations as it's not looking too promising.

Thanks,

Scott

Subject: RE: Current FBML documentation/spec

Hi Scott,

I just got out of a long meeting on this. In terms of the documentation and providing a test console, we have told all of the prospective partners that this won't be available until 4/16. However, we are working hard to get you a draft asap and I am pushing the team to

have something ready to send later this week.

In terms of promotion, here's what we will be offering launch partners:

- *Invitation to launch event.
- *Exhibition table at launch event.
- *Part of keynote slide presentation at launch event.
- *Part of press release announcing the launch partners.
- *Part of site-wide announcement on Facebook.com.
- *Placement in the platform directory.

Here's the additional promotion we're willing to offer Amazon if you build a mutually agreeable app by launch:

- *Keynote Demonstration and speaking opportunity – there will be 3-4 companies participating.
- *Promotion on a featured application page being developed by Facebook.
- *Other PR opportunities, including a joint press release potentially.

As we've discussed, on the promotional front, we're bringing out the big guns for the first time in the history of the company, so it will be great publicity for your widget strategy. Additionally, since Amazon will be one of the first companies to have an app available on Facebook, you will be perfectly positioned to dominate installations and realize all of the associated benefits of the viral promotion (i.e. newsfeed stories, etc.) and more importantly, drive significant sales through the associates program.

Anyway, hopefully this helps on some level. Let's discuss in more detail if you have any questions. Also, re the other contract, I'm about to send you an email on that.

Thanks,
David

Dave,

I am not very hopeful we'll have any widget work done by May 24th given we don't have a tech spec to work with - is getting us something still a ways out?

I've been pushing them, but it sounds like we won't have something until late next week. Are your engineers fully up the learning curve on our existing APIs?

Dave,

Any updates on this front? I'm concerned that if we don't get a technical spec - even a draft - in front of our engineers this week, we may not be able to get the resources behind the project in time for your launch.

Guys,

We'd like to move quickly on this. Do you have a spec you can shoot us? Even a draft is ok. Just need to engage our engineers to see how feasible it would be to get things rolling by your launch.

Thanks,

Scott
