Subject: Message summary [mid.1387583687091:37efb49ffae8351412]

Simon Cross:

>quick heads up - I looked at the content plan for f8 - and there was no where in 20 sessions, that we were telling devs how to opt into stuff like app-scoped IDs, and the things we've built to make it OK.
>
>Eddie's 45 min session is rightly focussed on the user-facing changes in the new login.
>
>Fran & team are spinning up some random session about Unity, which is very niche.
>
>I pretty strongly feel we need a place to explain to devs - at a code level and database - what they need to do to move to the new model.
>
>Peter's trying to setup time with you to discuss - but we need to close this out soon to prevent another random session being spun up.

Ilya Sukhar:

>Yeah I spoke to Fran about this

Ilya Sukhar:

>I think we need a high level description and title that isn't totally negative

Simon Cross:

>we actually have lots of positive stuff to talk about that developers actually will love and make the transition actually OK - currently don't have space to talk about these

Simon Cross:

>Developers really care that we're thinking about their use cases, and building things to enable them to continue

Simon Cross:

>insane that we're planning on 45 mins on unity, when we have not space to talk about the details of app-scoped IDs - which affect every single app on Platform

Ilya Sukhar:

>The unity thing isn't final

Ilya Sukhar:

>I'm open to a session about the changes - can you come up with a proposal of how we'd slot it on the schedule?

Simon Cross:

>here's a proposal of the additional stuff I think we need to cover:
<https://our.intern.facebook.com/intern/tasks/?t=3911772>

Simon Cross:

>(the 2nd section: "additional...") - this is deffo 45 mins of material on its own

Ilya Sukhar:

>I mean like can create a title and a description that you'd want to see on the schedule

Simon Cross:

>sure

Simon Cross:

>Title: Graph API 2.0 - building with the new Facebook Login and Graph API

>Desc: Find out how to migrate your existing mobile and web apps to the new Facebook Login

Ilya Sukhar:

>We aren't actually calling it 2.0 right?

Simon Cross:

>we actually are

Simon Cross:

>we're going to call the current/classic API v1.0

Simon Cross:

>and the new stuff 2.0

Ilya Sukhar:

>Is the path going to be /2.0?

Simon Cross:

>as a developer - you'll actually opt in to the new facebook login, app scoped IDs and everything by including v2.0 in the path

Simon Cross:

>yes, v2.0 in the path

Ilya Sukhar:

>Ok

Simon Cross:

>so we have the new Facebook login, but we're really launching Graph API 2.0 as well

Ilya Sukhar:

>Didn't know that

Simon Cross:

>yeah, sorry, we only discussed this in the PS12n catchup late on Thurs

Simon Cross:

>should have let you know

Simon Cross:

>was going to sync at 1:1 today, but its been moved to thurs

Simon Cross:

>main reason was that we were consistently having problems working out to refer to the current/classic API.

Ilya Sukhar:

>Sorry about the move - Zuck reviews bouncing all over the place.

Ilya Sukhar:

>I think you are right that we need to feature the migration stuff a lot more.

Ilya Sukhar:

>I would prefer it be tied into something more positive but maybe that's not possible.

Simon Cross:

>I think the most impactful way to make developers feel at ease about these changes is make it really clear what they have to do to adopt them.

>

>Classic example - if I hear 'app-scoped-id' but don't hear about test apps or the business mapping API - I'm gonna feel bad.

>

>If I hear about non-app friends but don't hear about the taggable_friends and invitable_friends APIs - I'm gonna feel bad.

>

>Eddie's current session is rightly about the user-facing changes. But its a room full of developers, we need to make the work we want them to go do, really clear and simple.
