I think it's fair to say: "those are just addendum and we need to original contracts where access to private APIs may be specified"

Hello All,

I hope I am not missing something here, but the attached addendums (only one is fully executed btw), do not specify access to any private APIs in particular.

The latter may be specified in the original contract which we have not been able to locate on our end and I guess they have not either.

@Eddie, any chance we can go back and ask again?

Contracts attached. There are two here – between FB <=> DNP [vendor] and FB <=> Walgreens [photo kiosks installed in store].

Legal sent me all the contracts they have on file for Walgreens and there is nothing related to auth.login (mostly NDAs and a Payment contract).

Is it possible to ask them to send us the contract they are referring to as I think our copy may have been misplaced?

Thanks a lot,
kp

Yeah, pulling the contract would be good.

I'm cool with them keeping auth.login as they already have it – removing it would be a distraction at this stage.

Can we see what perms they're using? Obvs they may be affected if they're using friends_photos.

Lastly, we need to get them Login Reviewed ASAP.

Hello Eddie,

I would love to check if we have a contract in place indeed (no reason to doubt their claim though), but more interested in finding out what it covers exactly and for how long....

Let me talk to contracts first if that's ok.

Best,
kp

Hi all – see blow for a question from a developer about their use of auth.login.

Their scenario is a Walgreens photo kiosk with FB Login. Sounds like they are covered by a contract.

He's asking if anything will break with the migration – my sense is “no”, but wanted to make sure before I respond.

Thanks,
Eddie

Eddie,

We are not using OAuth to authenticate with Facebook, we are using the following URL provided by Aryeh.
<https://api.facebook.com/method/auth.login>.

We have a contract for our generic implementation and Walgreens has a contract with Facebook for their app id..

WAG ID: 129454497090252
Generic ID: 129454497090252

Best Regards,

Travis McCowan

Hi Travis – thanks for your note. A few questions:

- 1/ what specific API(s) are you calling?
- 2/ do you have any contracts in place with Facebook?
- 3/ what's your app ID?

Thanks,
Eddie

Hello Eddie,

I'm still trying to get an official answer if you have a few seconds to read my previous email. Thank you for your time.

I hope you're doing well. I'm following up to see if I could get an answer regarding the private login API. Thank you for your time and help.

I work for DNP developing a printing solution that has been deployed to one of the largest pharmacy chains in the US. In 2011 I went to the Facebook Open Graph Technology Day in Austin, TX and met Aryeh Selekman. Aryeh helped us gain access to the private API for logging into facebook so customers can download and print their Facebook photos from our kiosk software. The private API made sense because these systems don't have keyboards attached and an open browser window is a security risk. I'm trying to understand the future of this API as FB moves forward with oauth 2.0 and the latest graph API. Does Facebook have plans to shut down this private login method?

Best Regards,

Travis McCowan

Hi Travis. Thanks for reaching out. I'm connecting you with Eddie O'Neil who drives our Platform/API work.

Thanks and best of luck.

Mike
