Description	<p>background: https://www.facebook.com/groups/555208077861145/permalink/598712373510715/ and https://www.facebook.com/groups/555208077861145/permalink/624267837621835/</p> <p>With PS12n, Apps won't get access to non-app friends when calling /me/friends. However Games on Canvas with Credits will automatically get this. The other main use case for non-app-friends (NAF) is tagging, but we're building a tagging API to satisfy this case.</p>

Given that, there are VERY few cases where we want an app to have non-app friends. This ability will be gated by the capability. However, we still want apps to be able to request access to NAF, but not make this a core part of the developer experience.

So, in the Login Review flow, we need some copy, with a link to a help-center form where devs can request access to NAF, and explain why.

Submissions should be routed to DevOps, and from there to Platform Product (Eddie, Simon, Ilya, Doug) for review.

If the app has a legitimate case, we'll add them to the correct Capability in order to access NAF, assuming the user has granted the user_friends permission in the GDP.
