Subject:	Message summary [mid.1369073044867:1a7606a15dc8a83265]

Kevin Lacker:
>man, this v3 effort is going to be immense to get everyone on board

Ilya Sukhar:
>What specifically

Ilya Sukhar:
>V3 is a term that means so many things

Kevin Lacker:
>yeah v3 term blows

Kevin Lacker:
>thats just how constantin and alan describe it all the time

Kevin Lacker:
>i mean the effort to define a "core" subset and then not break it

Kevin Lacker:
>there are many different people advocating some random mixup of the core api

Kevin Lacker:
>and some parts of it that are clearly bad

Ilya Sukhar:
>Yeah it's a total mess. Apparently Mike got pissed about poor execution lately

Kevin Lacker:
>what group's poor execution

Kevin Lacker:
>i mean, i have my own perception of what is being executed poorly ;-)

Ilya Sukhar:
>No clear plan for v3 - falls on Doug / Constantin

Kevin Lacker:
>heres a fun acronym

Kevin Lacker:
>CORE = Clean Or Remove Everything

FB-01364897

Kevin Lacker:
>hmm, yeah ok v3 is a bad name

Kevin Lacker:
>the part i think developers really need is the separation into "beta" vs "core", and core being something that we will not intentionally break

Kevin Lacker:
>next step is to improve unintentional breakage, and docs

Ilya Sukhar:
>Yeah we shouldn't tie ourselves to this v3 effort. It's a mess.

Kevin Lacker:
>it seems like folks are occasionally referring to the whole "define some subset as stable" as "v3"

Kevin Lacker:
>kind of ridiculous how much time spent arguing about the name of projects

Kevin Lacker:
>i need to dig in and understand the api set

Ilya Sukhar:
>Yeah people want me to drive this initiative alongside v3 but it seems unrealistic

Kevin Lacker:
>what is v3 exactly

Kevin Lacker:
>just creating a clean core is hard enough without tying it to a bunch of other randomass stuff

Ilya Sukhar:
>V3 is the deprecation stuff

Ilya Sukhar:
>And half hearted attempts to provide replacements

Kevin Lacker:
>i see

Kevin Lacker:
>yeah all this concern is around message

Kevin Lacker:
>when the messaging is not really as important as having a good product at the end of the day

Kevin Lacker:
>so v3 is like, "whenever we remove friends.get and stream.get"

Ilya Sukhar:
>Yep. Constantin made some doc. I'll forward to you when I get a chance

FB-01364898

Kevin Lacker:
>man

Kevin Lacker:
>this v3 stuff blows

Kevin Lacker:
>a bunch of people halfassedly driving

Kevin Lacker:
>in em sync just now everyone was talking about v3 as if the plan was very set, we were going to remove stuff but offer people more to compensate, and the date is nov 1

Ilya Sukhar:
>Yeah basically it's a cluster duck

Kevin Lacker:
>hard to get much done by nov 1

Kevin Lacker:
>like, cleaning up junk like is_verified

Kevin Lacker:
>there's gonna be 100 things like that

Ilya Sukhar:
>Yeah

Kevin Lacker:
>ok so that just seems fucked and i agree we don't want to tie our efforts to any platform v3 talk

Kevin Lacker:
>unless it's scrappable i guess

Kevin Lacker:
>so many people proposing shit

Kevin Lacker:
>this doc is so schizo

Kevin Lacker:
>"Our philosophy is that data should only be shared with an app when that user wants to share it."

Kevin Lacker:
>you mean, our philosophy as of right now

Kevin Lacker:
>not for the past seven years when it was different

Kevin Lacker:
>i'm gonna look through the api and take notes

3

Kevin Lacker:
>i gavey ou access to a zoho doc

Kevin Lacker:
>lol

Kevin Lacker:
>well, constantin claims the friends_game_activity permission is actually misdocumented and does something totally different

Ilya Sukhar:
>I'm not sure Constantin is as good as you say

Kevin Lacker:
>did i say he was good?

Kevin Lacker:
>i think he is philosophically aligned

Kevin Lacker:
>fairly pro-parse

Kevin Lacker:
>but not like, good at getting things done

Kevin Lacker:
>ok, that api triage doc is fairly filled out

Kevin Lacker:
>with my initial thoughts on whether to "core" or "beta" something

Kevin Lacker:
>i feel like this was a helpful exercise, there are definitely some questions, and there sure are a lot of things that won't make any sense without friend access
